DETAILED ACTION

Claims 1-33 are pending and are presented for examination.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to a method comprising effecting electroporation, classified in class 435, subclass 173.6.
- II. Claims 17-23 and 31-33, drawn to a flow-electroporation apparatus, classified in class 435, subclass 285.2.
- III. Claims 24-30, drawn to an apparatus for electroporating a sample comprising of a controller, classified in class 435, subclass 285.2.

The inventions are distinct, each from the other because of the following reasons:

Invention I is related to Inventions II and III as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus, as the electroporation can be performed by an apparatus that does not have a channel for the flow of particles or a controller. More specifically, the sample may be displaced across electric field lines by means other than flow or by a controller.

Art Unit: 1651

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are apparatus with different modes of operation and functions. While both inventions require a pair of electrodes, Invention III requires a controller configured to displace a sample relative to one or both of the electrodes, which is not required by Invention II. Additionally, Invention II requires a flow channel, which is not required by Invention III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
